

UNIWIN

PC software, for online data capture and transfer

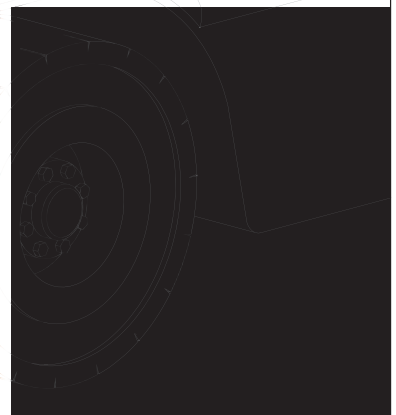

BENEFITS

- Integrates RAVAS scales in a network
- Manages multiple UniMobile PDA's
- Configuration set builds applications
- Interface between work floor and ERP
- Standard kernel for Windows systems
- Data exchange with SAP, Exact, Oracle, Navision

Easy connectivity

Integrated information

RAVAS

FUNCTIONS

- Creation of jobs and transfer of job list to UniMobile PDA's
- Capturing weight data and additional information via UniMobile
- Exchange of data with WMS or ERP systems via shared files
- Authorization on user level by user name and password
- Queries on available variables
- Task planner for automatic reporting by e-mail, fax or printer

HOW UNIWIN WORKS

UniWin is a PC software for online data exchange with UniMobile PDA's that operate in conjunction with RAVAS mobile scales. UniWin allows you to create jobs on a PC and send these to UniMobile PDA's via WLAN. The UniMobile software captures both qualitative (e.g. barcodes) and quantitative information (weight) on goods handled, and sends these back to the UniWin PC, where they are recorded in a central database for further processing. UniWin also makes the information available to ERP/WMS systems, via shared files. UniWin is the ideal interface between factory floor weighing and ERP systems, such as SAP, JD Edwards, Exact, Navision, Oracle, Sage, etc.

STANDARD SPECIFICATIONS

- System requirements Microsoft Windows on PC
Windows Mobile or Windows CE, version 5.0 or higher on PDA
- Standard languages English, German, French, Italian and Dutch (other languages on demand)

PREMIUM OPTIONS*

- Extra UniWin workstations allowing more users to work with Uniwin simultaneously
- Online Internet linking of different (inter) national UniWin locations into a central management system

* The use of options may change related specifications.
